Central Heating Products

## X100 Inhibitor

### **Will Sentinel X100 protect my system if it is filled with softened water?**

Softened water, particularly those from household softeners not conforming to BS EN 14743, is not suitable for filling a domestic central heating system unless the water is treated with a high quality corrosion inhibitor. Unlike many other products on the market, Sentinel X100 has been especially designed to cope with all types of supply water, even softened water and affords complete protection.

### **Can I use Sentinel X100 if I have aluminium components in my system?**

Yes!! Sentinel X100 was specially developed to protect multi-metal systems, including those comprising aluminium components. Sentinel X100 protects aluminium by ensuring and maintaining neutral pH conditions.

### **Can I overdose my system with Sentinel X100?**

It is not necessary to add more than 1 litre of Sentinel X100 to a typical domestic system of 8 to 10 radiator panels (which is a system volume of about 70L). However, exceeding this dose, by even as much as several percent will have no negative effect on the system... only on the purse!!

### **Is Sentinel X100 compatible with other brands of treatment products?**

The effects on system protection and function of system components cannot be predicted when adding Sentinel X100 to a system already containing other chemical inhibitors. Therefore, it is not recommended to mix Sentinel X100 with other inhibitor products.
